

Use Maths-Pro or Geo-Pro to draw large versions of one or more of the following.

Use guidelines on Maths-Pro to check whether lines are parallel or not, and measure shapes carefully to check if they are the same size.

- 1 The vertical lines appear to not be parallel.
- 2 The top black circle appears larger than the lower black circle.
- 3 The horizontal segments appear to be different lengths.
- 4 Grey spots appear at the intersections.
- 5 The top parallel line appears to line up with the one on the top right (but doesn't really).
- 6 The white square appears larger than the black one.
- 7 The vertical lines appear to not be parallel.
- 8 The horizontal lines appear bowed, not straight and parallel.
- 9 The segments appear to increase in length from bottom to top.
- 10 The square appears to be a trapezium.
- 11 The top white square appears larger than the bottom black square.
- 12 The dot appear closer to the top of the triangle than the bottom.
