

Use a grey lead pencil initially!

Poster design 11

Use Maths-Pro to create a cardboard dodecagon stencil by drawing points around the protractor every 30° . Next, draw a large circle with diameters marked every 30° .

Use your dodecagon template to draw a dodecagon every 30° around the circle, so that each dodecagon has a corner at the centre of the circle. Erase the circle and colour your design.
